

Contents

1	Energy Band Structures of Semiconductors	1
1.1	Free-Electron Model	1
1.2	Bloch Theorem	3
1.3	Nearly Free Electron Approximation	4
1.4	Reduced Zone Scheme	8
1.5	Free-Electron Bands (Empty-Lattice Bands)	9
1.6	Pseudopotential Method	13
1.7	$\mathbf{k} \cdot \mathbf{p}$ Perturbation	19
1.8	Density of States	25
2	Cyclotron Resonance and Energy Band Structures	29
2.1	Cyclotron Resonance	29
2.2	Analysis of Valence Bands	38
2.3	Spin-Orbit Interaction	43
2.4	Non-parabolicity of the Conduction Band	51
2.5	Electron Motion in a Magnetic Field and Landau Levels	54
2.5.1	Landau Levels	54
2.5.2	Landau Levels of a Non-parabolic Band	61
2.5.3	Landau Levels of the Valence Bands	65
3	Wannier Function and Effective Mass Approximation	73
3.1	Wannier Function	73
3.2	Effective-Mass Approximation	75
3.3	Shallow Impurity Levels	80
3.4	Impurity Levels in Ge and Si	83
3.4.1	Valley-Orbit Interaction	86
3.4.2	Central Cell Correction	87
3.5	Electron Motion Under an External Field	89
3.5.1	Group Velocity	90
3.5.2	Electron Motion Under an External Force	93
3.5.3	Electron Motion and Effective Mass	96

4	Optical Properties 1	99
4.1	Reflection and Absorption	99
4.2	Direct Transition and Absorption Coefficient	103
4.3	Joint Density of States	105
4.4	Indirect Transition	110
4.5	Exciton	116
4.5.1	Direct Exciton	116
4.5.2	Indirect Exciton	125
4.6	Dielectric Function	127
4.6.1	E_0 , $E_0 + \Delta_0$ Edge	130
4.6.2	E_1 and $E_1 + \Delta_1$ Edge	132
4.6.3	E_2 Edge	133
4.6.4	Exciton	133
4.7	Piezobirefringence	135
4.7.1	Phenomenological Theory of Piezobirefringence	135
4.7.2	Deformation Potential Theory	136
4.7.3	Stress-Induced Change in Energy Band Structure	140
5	Optical Properties 2	147
5.1	Modulation Spectroscopy	147
5.1.1	Electro-Optic Effect	147
5.1.2	Franz-Keldysh Effect	149
5.1.3	Modulation Spectroscopy	153
5.1.4	Theory of Electroreflectance and Third-Derivative Form of Aspnes	157
5.2	Raman Scattering	161
5.2.1	Selection Rule of Raman Scattering	167
5.2.2	Quantum Mechanical Theory of Raman Scattering	172
5.2.3	Resonant Raman Scattering	177
5.3	Brillouin Scattering	180
5.3.1	Scattering Angle	182
5.3.2	Brillouin Scattering Experiments	187
5.3.3	Resonant Brillouin Scattering	190
5.4	Polaritons	193
5.4.1	Phonon Polaritons	193
5.4.2	Exciton Polaritons	197
5.5	Free-Carrier Absorption and Plasmon	200
6	Electron-Phonon Interaction and Electron Transport	207
6.1	Lattice Vibrations	207
6.1.1	Acoustic Mode and Optical Mode	207
6.1.2	Harmonic Approximation	212
6.2	Boltzmann Transport Equation	221
6.2.1	Collision Term and Relaxation Time	223
6.2.2	Mobility and Electrical Conductivity	225

6.3	Scattering Probability and Transition Matrix Element	230
6.3.1	Transition Matrix Element	230
6.3.2	Deformation Potential Scattering (Acoustic Phonon Scattering)	233
6.3.3	Ionized Impurity Scattering	235
6.3.4	Piezoelectric Potential Scattering	240
6.3.5	Non-Polar Optical Phonon Scattering	242
6.3.6	Polar Optical Phonon Scattering	243
6.3.7	Inter-Valley Phonon Scattering	248
6.3.8	Deformation Potential in Degenerate Bands	249
6.3.9	Theoretical Calculation of Deformation Potentials	251
6.3.10	Electron–Electron Interaction and Plasmon Scattering	256
6.3.11	Alloy Scattering	263
6.4	Scattering Rate and Relaxation Time	264
6.4.1	Acoustic Phonon Scattering	268
6.4.2	Non-Polar Optical Phonon Scattering	271
6.4.3	Polar Optical Phonon Scattering	273
6.4.4	Piezoelectric Potential Scattering	274
6.4.5	Inter-Valley Phonon Scattering	275
6.4.6	Ionized Impurity Scattering	276
6.4.7	Neutral Impurity Scattering	277
6.4.8	Plasmon Scattering	278
6.4.9	Alloy Scattering	279
6.5	Mobility	279
6.5.1	Acoustic Phonon Scattering	280
6.5.2	Non-Polar Optical Phonon Scattering	280
6.5.3	Polar Optical Phonon Scattering	283
6.5.4	Piezoelectric Potential Scattering	283
6.5.5	Inter-Valley Phonon Scattering	284
6.5.6	Ionized Impurity Scattering	285
6.5.7	Neutral Impurity Scattering	286
6.5.8	Alloy Scattering	286
7	Magnetotransport Phenomena	287
7.1	Phenomenological Theory of the Hall Effect	287
7.2	Magnetoresistance Effects	293
7.2.1	Theory of Magnetoresistance	293
7.2.2	General Solutions for a Weak Magnetic Field	294
7.2.3	Case of Scalar Effective Mass	296
7.2.4	Magnetoresistance	298
7.3	Shubnikov–de Haas Effect	301
7.3.1	Theory of Shubnikov–de Haas Effect	301
7.3.2	Longitudinal Magnetoresistance Configuration	305
7.3.3	Transverse Magnetoresistance Configuration	308
7.4	Magnetophonon Resonance	312

7.4.1	Experiments and Theory of Magnetophonon Resonance	312
7.4.2	Various Types of Magnetophonon Resonance	319
7.4.3	Magnetophonon Resonance Under High Electric and High Magnetic Fields	324
7.4.4	Polaron Effect	329
8	Quantum Structures	333
8.1	Historical Background	333
8.2	Two-Dimensional Electron Gas Systems	334
8.2.1	Two-Dimensional Electron Gas in MOS Inversion Layer	334
8.2.2	Quantum Wells and HEMT	343
8.3	Transport Phenomena in a Two-Dimensional Electron Gas	351
8.3.1	Fundamental Equations	351
8.3.2	Scattering Rate	353
8.3.3	Mobility of a Two-Dimensional Electron Gas	378
8.4	Superlattices	386
8.4.1	Kronig–Penney Model	386
8.4.2	Effect of Brillouin Zone Folding	388
8.4.3	Tight Binding Approximation	391
8.4.4	sp^3s^* Tight Binding Approximation	393
8.4.5	Energy Band Calculations for Superlattices	395
8.4.6	Second Nearest–Neighbor sp^3 Tight Binding Approximation	400
8.5	Mesoscopic Phenomena	406
8.5.1	Mesoscopic Region	406
8.5.2	Definition of Mesoscopic Region	410
8.5.3	Landauer Formula and Büttiker–Landauer Formula	412
8.5.4	Research in the Mesoscopic Region	417
8.5.5	Aharonov–Bohm Effect (AB Effect)	417
8.5.6	Ballistic Electron Transport	419
8.6	Quantum Hall Effect	421
8.7	Coulomb Blockade and Single Electron Transistor	433
8.8	Quantum Dots	439
8.8.1	Addition Energy	440
8.8.2	Exact Diagonalization Method	443
8.8.3	Hamiltonian for Electrons in a Quantum Dot	445
8.8.4	Diagonalization of N Electrons Hamiltonian Matrix	447
8.8.5	Electronic States in Quantum Dots	449
8.8.6	Quantum Dot States in Magnetic Field	451
8.8.7	Electronic States in Elliptic and Triangular Quantum Dots	452

9	Light Emission and Laser	455
9.1	Einstein Coefficients A and B	456
9.2	Spontaneous Emission and Stimulated Emission	458
9.3	Band Tail Effect	464
9.4	Luminescence	468
9.4.1	Luminescence due to Band-to-Band Transition	469
9.4.2	Luminescence due to Excitons	470
9.4.3	Luminescence via Impurities	472
9.4.4	Luminescence in GaP and GaAsP via N Traps	477
9.4.5	Luminescence from GaInNAs	479
9.4.6	Light Emitting Diodes (LEDs) in Visible Region	481
9.5	Heterostructure Optical Waveguide	482
9.5.1	Wave Equations for Planar Waveguide	484
9.5.2	Transverse Electric Modes	487
9.5.3	Transverse Magnetic Modes	489
9.5.4	Effective Refractive Index	490
9.5.5	Confinement Factor	492
9.5.6	Laser Oscillations	493
9.6	Stimulated Emission in Quantum Well Structures	496
9.6.1	Confinement in Quantum Well	499
9.6.2	Optical Transition in Quantum Well Structures	503
9.6.3	Reduced Density of States and Gain	507
9.6.4	Strain Effect	510
9.7	Wurtzite Semiconductor Lasers	515
	Appendices	525
A	Delta Function and Fourier Transform	525
A.1	Dirac Delta Function	525
A.2	Cyclic Boundary Condition and Delta Function	527
A.3	Fourier Transform	530
B	Uniaxial Stress and Strain Components in Cubic Crystals	531
C	Boson Operators	535
D	Random Phase Approximation and Lindhard Dielectric Function	539
E	Density Matrix	541
F	Spontaneous and Stimulated Emission Rates	543
	References	549
