Preface to the Fourth Edition	<i>xiii</i>
Preface to the Third Edition	<i>xv</i>
Preface to the Second Edition	<i>xvii</i>
Preface to the First Edition	<i>xix</i>

1	Introduction	<i>1</i>
2	Electronic and Vibrational Molecular States	<i>7</i>
2.1	Introduction	<i>7</i>
2.2	Molecular Schrödinger Equation	<i>9</i>
2.3	Born–Oppenheimer Separation	<i>11</i>
2.3.1	Born–Oppenheimer Approximation	<i>13</i>
2.4	Electronic Structure Methods	<i>15</i>
2.4.1	The Hartree–Fock Equations	<i>17</i>
2.4.2	Density Functional Theory	<i>19</i>
2.5	Potential Energy Surfaces	<i>21</i>
2.5.1	Harmonic Approximation and Normal Mode Analysis	<i>24</i>
2.5.2	Operator Representation of the Normal Mode Hamiltonian	<i>27</i>
2.5.3	Construction of System–Bath Models	<i>31</i>
2.6	Adiabatic versus Diabatic Representation of the Molecular Hamiltonian	<i>36</i>
2.6.1	Adiabatic Picture	<i>36</i>
2.6.2	Diabatic Picture	<i>37</i>
2.6.3	Two-State Case	<i>40</i>
2.7	Condensed-phase Approaches	<i>42</i>
2.7.1	Dielectric Continuum Model	<i>43</i>
2.7.1.1	Medium Electrostatics	<i>43</i>
2.7.1.2	Reaction Field Model	<i>47</i>
2.7.2	Explicit Quantum-classical Solvent Model	<i>49</i>
2.8	Supplement	<i>51</i>
2.8.1	Franck–Condon Factors	<i>51</i>
2.8.2	The Two-level System	<i>52</i>
2.8.3	The Linear Molecular Chain and the Molecular Ring	<i>55</i>
	References	<i>57</i>
	Further Reading	<i>57</i>

3	Dynamics of Isolated and Open Quantum Systems	59
3.1	Introduction	60
3.2	Time-dependent Schrödinger Equation	66
3.2.1	Wave Packets	66
3.2.2	The Interaction Representation	69
3.2.3	Multidimensional Wave Packet Dynamics	71
3.3	The Golden Rule of Quantum Mechanics	75
3.3.1	Transition from a Single State into a Continuum	75
3.3.2	Transition Rate for a Thermal Ensemble	78
3.3.3	Green's Function Approach	81
3.4	The Nonequilibrium Statistical Operator and the Density Matrix	84
3.4.1	The Density Operator	84
3.4.2	The Density Matrix	86
3.4.3	Equation of Motion for the Density Operator	88
3.4.4	Wigner Representation of the Density Operator	90
3.4.5	Dynamics of Coupled Multilevel Systems in a Heat Bath	93
3.5	The Reduced Density Operator and the Reduced Density Matrix	96
3.5.1	The Reduced Density Operator	96
3.5.2	Equation of Motion for the Reduced Density Operator	97
3.5.3	Mean-field Approximation	98
3.5.4	The Interaction Representation of the Reduced Density Operator	99
3.5.5	The Nakajima–Zwanzig Equation	101
3.5.6	Second-order Equation of Motion for the Reduced Density Operator	105
3.6	Quantum Master Equation	107
3.6.1	Markov Approximation	109
3.7	The Reservoir Correlation Function	112
3.7.1	General Properties of $C_{uv}(t)$	112
3.7.2	Harmonic Oscillator Reservoir	114
3.7.3	The Spectral Density	116
3.7.4	Linear Response Theory for the Reservoir	120
3.7.5	Classical Description of $C_{uv}(t)$	122
3.8	Reduced Density Matrix in Energy Representation	123
3.8.1	The Quantum Master Equation in Energy Representation	123
3.8.2	Multilevel Redfield Equations	126
3.8.2.1	Population Transfer: $a = b, c = d$	127
3.8.2.2	Coherence Dephasing: $a \neq b, a = c, b = d$	129
3.8.2.3	Remaining Elements of $R_{ab,cd}$	129
3.8.3	The Secular Approximation	130
3.8.4	State Expansion of the System–Reservoir Coupling	131
3.8.4.1	Some Estimates	132
3.9	Coordinate and Wigner Representation of the Reduced Density Matrix	133
3.10	The Path Integral Representation of the Density Matrix	135
3.11	Hierarchy Equations of Motion Approach	140
3.12	Coherent to Dissipative Dynamics of a Two-level System	143

3.12.1	Coherent Dynamics	143
3.12.2	Dissipative Dynamics Using Eigenstates	144
3.12.3	Dissipative Dynamics Using Zeroth-order States	147
3.13	Trajectory-based Methods	149
3.13.1	The Mean-field Approach	149
3.13.2	The Surface Hopping Method	152
3.14	Generalized Rate Equations: The Liouville Space Approach	155
3.14.1	Projection Operator Technique	156
3.14.2	Generalized Rate Equations	157
3.14.3	Rate Equations	159
3.14.4	The Memory Kernels	159
3.14.5	Second-order Rate Expressions	161
3.14.6	Fourth-order Rate Expressions	164
3.14.6.1	Three-level System with Sequential Coupling	165
3.15	Supplement	168
3.15.1	Thermofield Dynamics	168
3.15.2	Stochastic Schrödinger Equation	172
	References	175
	Further Reading	176
4	Interaction of Molecular Systems with Radiation Fields	177
4.1	Introduction	178
4.2	Absorption of Light	182
4.2.1	Linear Absorption Coefficient	182
4.2.2	Dipole–Dipole Correlation Function	184
4.3	Nonlinear Optical Response	186
4.3.1	Nonlinear Polarization	186
4.3.2	Nonlinear Response Functions	189
4.3.3	Eigenstate Expansion of the Response Functions	191
4.3.4	Cumulant Expansion of the Response Functions	194
4.3.5	Rotating Wave Approximation	197
4.3.6	Pump–Probe Spectroscopy	198
4.3.7	Two-dimensional Spectroscopy	202
4.4	Field Quantization and Spontaneous Emission of Light	206
	References	208
	Further Reading	209
5	Vibrational Dynamics: Energy Redistribution, Relaxation, and Dephasing	211
5.1	Introduction	211
5.2	Intramolecular Vibrational Energy Redistribution	215
5.2.1	Zeroth-order Basis and State Mixing	215
5.2.2	Golden Rule and Beyond	219
5.3	Intermolecular Vibrational Energy Relaxation	223
5.3.1	The System–Reservoir Hamiltonian	223
5.3.2	Instantaneous Normal Modes	226
5.3.3	Generalized Langevin Equation	228

5.3.4	Classical Force–Force Correlation Functions	231
5.3.5	Dissipative Dynamics of a Harmonic Oscillator	234
5.4	Polyatomic Molecules in Solution	237
5.4.1	System–Reservoir Hamiltonian	237
5.4.2	Higher Order Multiquantum Relaxation	238
5.5	Quantum–Classical Approaches to Relaxation and Dephasing	243
	References	247
	Further Reading	247
6	Intramolecular Electronic Transitions	249
6.1	Introduction	249
6.1.1	Optical Transitions	250
6.1.2	Internal Conversion Processes	255
6.2	The Optical Absorption Coefficient	255
6.2.1	Golden Rule Formulation	255
6.2.2	The Density of States	258
6.2.3	Absorption Coefficient for Harmonic Potential Energy Surfaces	260
6.2.4	Absorption Lineshape and Spectral Density	263
6.2.5	Cumulant Expansion of the Absorption Coefficient	264
6.2.6	Absorption Coefficient for Model Spectral Densities	266
6.3	Absorption Coefficient and Dipole–Dipole Correlation Function	269
6.3.1	Absorption Coefficient and Wave Packet Propagation	269
6.3.2	Absorption Coefficient and Reduced Density Operator Propagation	273
6.3.3	Mixed Quantum–Classical Computation of the Absorption Coefficient	275
6.4	The Emission Spectrum	280
6.5	Optical Preparation of an Excited Electronic State	281
6.5.1	Wave Function Formulation	281
6.5.1.1	Case of Short Pulse Duration	284
6.5.1.2	Case of Long Pulse Duration	284
6.5.2	Density Matrix Formulation	284
6.6	Internal Conversion Dynamics	286
6.6.1	The Internal Conversion Rate	287
6.6.2	Ultrafast Internal Conversion	288
6.7	Supplement	290
6.7.1	Absorption Coefficient for Displaced Harmonic Oscillators	290
	References	294
	Further Reading	294
7	Electron Transfer	295
7.1	Classification of Electron Transfer Reactions	295
7.2	Theoretical Models for Electron Transfer Systems	305
7.2.1	The Electron Transfer Hamiltonian	305
7.2.2	The Electron–Vibrational Hamiltonian of a Donor–Acceptor Complex	310

7.2.2.1	The Spin-Boson Model	312
7.2.2.2	Two Independent Sets of Vibrational Coordinates	313
7.2.3	Electron–Vibrational State Representation of the Hamiltonian	314
7.3	Regimes of Electron Transfer	315
7.3.1	Landau–Zener Theory of Electron Transfer	319
7.4	Nonadiabatic Electron Transfer in a Donor–Acceptor Complex	323
7.4.1	High-temperature Case	323
7.4.2	High-temperature Case: Two Independent Sets of Vibrational Coordinates	327
7.4.3	Low-temperature Case: Nuclear Tunneling	330
7.4.4	The Mixed Quantum–Classical Case	333
7.4.5	Description of the Mixed Quantum–Classical Case by a Spectral Density	335
7.5	Bridge-Mediated Electron Transfer	336
7.5.1	The Superexchange Mechanism	338
7.5.2	Electron Transfer Through Arbitrary Large Bridges	340
7.5.2.1	Case of Small Intrabridge Transfer Integrals	340
7.5.2.2	Case of Large Intrabridge Transfer Integrals	341
7.6	Nonequilibrium Quantum Statistical Description of Electron Transfer	343
7.6.1	Unified Description of Electron Transfer in a Donor–Bridge–Acceptor System	344
7.6.2	Transition to the Adiabatic Electron Transfer	347
7.7	Heterogeneous Electron Transfer	347
7.7.1	Nonadiabatic Charge Injection into the Solid State Described in a Single-Electron Model	348
7.7.1.1	Low-temperature Case	351
7.7.1.2	High-temperature Case	352
7.7.1.3	HET-induced Lifetime	352
7.7.2	Ultrafast Photoinduced HET from a Molecule into a Semiconductor. A Case Study	354
7.7.3	Nonadiabatic Electron Transfer from the Solid State into the Molecule	355
7.8	Charge Transmission Through Single Molecules	356
7.8.1	Inelastic Charge Transmission	359
7.8.1.1	An Example	360
7.8.2	Elastic Charge Transmission	361
7.8.2.1	An Example	364
7.8.2.2	Inclusion of Vibrational Levels	365
7.9	Photoinduced Ultrafast Electron Transfer	367
7.9.1	Quantum Master Equation for Electron Transfer Reactions	372
7.9.2	Rate Expressions	377
7.10	Supplement	378
7.10.1	Landau–Zener Transition Amplitude	378
7.10.2	The Multimode Marcus Formula	379

7.10.3	Second-order Electron Transfer Rate	380
7.10.4	Fourth-order Donor–Acceptor Transition Rate	382
7.10.5	Rate of Elastic Charge Transmission Through a Single Molecule	385
	References	387
	Further Reading	388
8	Proton Transfer	389
8.1	Introduction	389
8.2	Proton Transfer Hamiltonian	395
8.2.1	Hydrogen Bonds	395
8.2.2	Reaction Surface Hamiltonian for Intramolecular Proton Transfer	399
8.2.3	Tunneling Splittings	400
8.2.4	The Proton Transfer Hamiltonian in the Condensed Phase	404
8.2.4.1	Adiabatic Representation	405
8.2.4.2	Diabatic Representation	406
8.3	Adiabatic Proton Transfer	407
8.4	Nonadiabatic Proton Transfer	410
8.5	The Intermediate Regime: From Quantum to Quantum–Classical Hybrid Methods	412
8.5.1	Multidimensional Wave Packet Dynamics	413
8.5.2	Surface Hopping	415
8.6	Proton-coupled Electron Transfer	417
	References	419
	Further Reading	419
9	Excitation Energy Transfer	421
9.1	Introduction	421
9.2	The Aggregate Hamiltonian	427
9.2.1	The Intermolecular Coulomb Interaction	430
9.2.1.1	Dipole–Dipole Coupling	432
9.2.2	The Two-level Model	433
9.2.2.1	Classification of the Coulomb Interactions	433
9.2.3	Single and Double Excitations of the Aggregate	436
9.2.3.1	The Ground State Matrix Element	438
9.2.3.2	The Single Excited State Matrix Elements	438
9.2.3.3	The Double Excited State Matrix Elements	439
9.2.3.4	Off-Diagonal Matrix Elements and Coupling to the Radiation Field	440
9.2.3.5	Neglect of Intermolecular Electrostatic Coupling	441
9.2.4	Introduction of Delocalized Exciton States	441
9.2.4.1	The Molecular Heterodimer	443
9.2.4.2	The Finite Molecular Chain and the Molecular Ring	443
9.3	Exciton–Vibrational Interaction	444
9.3.1	Exclusive Coupling to Intramolecular Vibrations	445
9.3.2	Coupling to Aggregate Normal Mode Vibrations	448
9.3.3	Differentiating Between Intramolecular and Reservoir Normal Mode Vibrations	449

9.3.4	Exciton–Vibrational Hamiltonian and Excitonic Potential Energy Surfaces	449
9.4	Regimes of Excitation Energy Transfer	450
9.4.1	Quantum Statistical Approaches to Excitation Energy Transfer	452
9.5	Transfer Dynamics in the Case of Weak Excitonic Coupling: Förster Theory	453
9.5.1	The Transfer Rate	454
9.5.2	The Förster Rate	456
9.5.3	Nonequilibrium Quantum Statistical Description of Förster Transfer	458
9.5.3.1	Case of Common Vibrational Coordinates	462
9.5.3.2	Case of Vibrational Modulation of the Excitonic Coupling	464
9.6	Transfer Dynamics in the Case of Strong Excitonic Coupling	465
9.6.1	Rate Equations for Exciton Dynamics	465
9.6.2	Density Matrix Equations for Exciton Dynamics	466
9.6.3	Site Representation	468
9.6.4	Excitation Energy Transfer Among Different Aggregates	471
9.6.5	Exciton Transfer in the Case of Strong Exciton–Vibrational Coupling	472
9.6.6	Nonperturbative and Non-Markovian Exciton Dynamics	475
9.7	Optical Properties of Aggregates	477
9.7.1	Case of No Exciton–Vibrational Coupling	479
9.7.1.1	Static Disorder	481
9.7.2	Inclusion of Exciton–Vibrational Coupling	484
9.7.2.1	The n -Particle Expansion	484
9.7.2.2	Weak Exciton–Vibrational Coupling	487
9.7.2.3	Strong Exciton–Vibrational Coupling	488
9.8	Excitation Energy Transfer Including Charge-transfer States	490
9.8.1	Excitation Energy Transfer Via Two-electron Exchange	490
9.8.2	Charge-transfer Excitons and Charge Separation	493
9.9	Exciton–Exciton Annihilation	496
9.9.1	Three-level Description of the Molecules in the Aggregate	498
9.9.2	The Rate of Exciton–Exciton Annihilation	499
9.10	Supplement	500
9.10.1	Second Quantization Notation of the Aggregate Hamiltonian	500
9.10.2	Photon-mediated Long-range Excitation Energy Transfer	501
9.10.2.1	Preparatory Considerations for the Rate Computation	503
9.10.2.2	Photon Correlation Functions	505
9.10.2.3	The Rate of Photon-mediated Excitation Energy Transfer	506
9.10.2.4	Some Estimates	508
9.10.3	Fourth-order Rate of Two-electron-transfer-assisted EET	509
	References	513
	Further Reading	514
